

ETOBICOKE FOOTBALL CLUB

EXTREME WEATHER & HEAT POLICY

DESCRIPTION:

Severe weather and lightning safety with respect to players, coaches, management and spectators at EFC events.

PURPOSE:

The safety of players, coaches, management and spectators is the primary concern of the EFC. This policy provides the direction to govern whether match competitions and training sessions will proceed or not under specific weather conditions. By understanding and following the information below, the safety of everyone will be greatly increased.

BACKGROUND:

This policy has been developed in consultation with Environment Canada's definition and recommendations for Extreme Heat and Extreme Cold.

LIGHTENING & WEATHER:

For Competitions in which a Referee is assigned

Ultimately, the referee has the final say over starting, delaying or restarting a match due to weather and/or current field conditions. Such unsafe conditions may include, but are not limited to, high winds greater than 60 km/hr, heavy rain, sight of lightning, significant water on the field and extreme cold/heat.

It is up to the discretion of the Referee to determine if conditions are safe to play. Waiting to stop play or not waiting to start play may result in a serious injury or loss of life. Referees are expected to act responsibly when dealing with such events during matches they are controlling.

ETOBICOKE FOOTBALL CLUB

For Competitions in which a Referee is not assigned

For the Club programs in which a referee is typically not assigned to a match, the Game Leader (team coach) for each team will collectively have the final say over starting, delaying or restarting a match due to weather and/or current field conditions. Such unsafe conditions may include, but not limited to, high winds greater than 60 km/hr, heavy rain, sight of lightning, significant water on the field and extreme cold/heat.

It is up to the discretion of each Coach (or designate) to determine if conditions are safe to play. Waiting to stop play or not waiting to start play may result in a serious injury or loss of life. Coaches and Team Officials are expected to act responsibly when dealing with such events during matches they are involved with. Coaches shall document unsafe field conditions and/or weather events at the field during the match, and provide to the Club.

Training Sessions

Coaches and Team Officials are expected to act responsibly to ensure conditions are safe for training. Coaches must cancel training sessions when conditions are not safe, and shall document unsafe field conditions and/or weather events at the field during the session.

Extreme Heat:

With the changing climate conditions, the Etobicoke/Greater Toronto area has seen an increase in the number of high heat days during the outdoor playing season. To ensure a safe and enjoyable playing experience, the Club shall govern competitions and training sessions in the following matter with respect to high and/or extreme heat.

ETOBICOKE FOOTBALL CLUB

Where the air temperatures (including the Humidex) reach the following thresholds one (1) hour prior to a match or training, the Club shall take the following actions:

Temperature	Game Day	Training Sessions
32C and under	Proceed as normal	Proceed as normal
32C to 38C	<p>Match to proceed. The Match must have at least one, 2 minute water break in each half. It is up to the discretion of the Referee and/or coaches to provide additional water breaks in each half.</p> <p>For those situations where teams can not field a minimum of 11 players, it is recommended that both coaches and referee(s) agree to shorten the game by at least 10%.</p>	Additional breaks should be incorporated into the training sessions.
38C and over	Game is cancelled.	Training sessions are to be cancelled.

In addition to the air temperature, the Club shall cancel matches and/or training sessions one (1) hour in advance should the Air Quality Index be Poor in the Etobicoke/ Greater Toronto area (as determined by Environment Canada).

ETOBICOKE FOOTBALL CLUB

COLD CONDITIONS:

Outdoor Matches and Trainings

Where the air temperatures (including the wind chill) reach the following thresholds one (1) hour prior to a match or training, the Club shall take the following actions:

Temperature	Game Day	Training Sessions
2C or above	Proceed as normal	Proceed as normal
under 2C	Game is cancelled.	Training sessions are to be cancelled.

Indoor Matches and Trainings

The Club, upon its determination that conditions are unsafe, shall cancel programming scheduled within its facilities due to unsafe weather conditions.

LIGHTNING AND WEATHER:

At any time upon confirmation of lightning, the Referee or Game Leader (team coach) may suspend or cancel the match. The Referee or Game Leader (team coach) is not required to first suspend the match prior to making the decision to cancel.

Seek shelter when the time difference between the sight of lightning and the sound of thunder is thirty (30) seconds or less. It is recommended that you wait thirty (30) minutes or more after hearing the last thunder before leaving the shelter. If you cannot see the lightning, just hearing the thunder is a good back up rule.

ETOBICOKE FOOTBALL CLUB

EXTREME HEAT:

When high or extreme heat is present one (1) hour prior to the start of a match or training, the Club shall send an email communication to all relevant participants, coaches and referees outlining the status of the Match. In addition, the Club will post such information on its social channels, Facebook and Twitter, and its website.

It is the responsibility of each participant to ensure the correct email address is on file with the Club (using the Club's methods) and it is recommended that each participant, coach and referee consult with or follow the Club's social channels and website.

EXTREME COLD:

When cold conditions trigger the Cold Weather component of this policy one (1) hour prior to the Match or training, the Club shall send an email communication to all relevant participants, coaches and referees outlining the status of the Match. In addition, the Club will post such information on its social channels, Facebook and Twitter, and its website.

It is the responsibility of each participant to ensure the correct email address is on file with the Club (using the Club's methods) and it is recommended that each participant, coach and referee consult with or follow the Club's social channels and website.

ADDITIONAL INFORMATION:

LIGHTNING

Please note the following recommendations from Environment Canada:

1. The existence of blue sky and absence of rain are not protection from lightning. Lightning can and does strike as far as ten (10) miles away from the rain shaft. It does not have to be raining for lightning to strike. Many lightning casualties occur in the beginning, as the storm approaches, because many

ETOBICOKE FOOTBALL CLUB

people ignore initial precursors of high winds, some rainfall and cloud cover. Generally, the lightning threat diminishes with time after the last sound of thunder, but may persist for more than thirty (30) minutes.

2. Lightning can strike ahead of the parent cloud – take action even if the thunderstorm is not overhead. Be aware of how close lightning is occurring. The flash-to-bang method is the easiest and most convenient way to estimate how far away lightning is occurring. Thunder always accompanies lightning, even though its audible range can be diminished due to background noise in the immediate environment and its distance from the observer.
3. Lightning awareness should be increased with the first flash of lightning or the first clap of thunder, no matter how far away. This activity must be treated as a wake-up call to all.
4. The most important aspect to monitor is how far away the lightning is occurring, and how fast the storm is approaching, relative to the distance of a safe shelter.
5. Recognize that personal observation of lightning may not be sufficient. Additional weather information may be required to ensure consistency, accuracy and adequate advance warning.
6. When larger groups are involved, the time needed to properly evacuate an area increases. As time requirements change, the distance at which lightning is noted and considered a threat to move into the area must be increased. Extending the range used to determine threat potential also increases the chance that a localized cell or thunderstorm may not reach the area giving the impression of a “false alarm”.
7. Know where the closest “safe structure or location” is to the field or playing area and know how long it takes to get to that safe structure or location.

Safe structure or location is defined as:

Any building normally occupied or frequently used by people, i.e., a building with plumbing and / or electrical wiring that acts to electrically ground the structure. Avoid using shower facilities for safe shelter and do not use the showers or plumbing facilities during a thunderstorm.

In the absence of a sturdy, frequently inhabited building, any vehicle with a hard metal roof (not a convertible or golf cart) and rolled-up windows can provide a measure of safety. A vehicle is certainly better than remaining outdoors. It is not the

ETOBICOKE FOOTBALL CLUB

rubber tires that make a vehicle a safe shelter, but the hard metal roof which dissipates the lightning strike around the vehicle. Do not touch the sides of any vehicle!

If no safe structure or location is within a reasonable distance, find a thick grove of small trees surrounded by taller trees or a dry ditch. Assume a crouched position on the ground with only the balls of the feet touching the ground, wrap your arms around your knees and lower your head. Minimize contact with the ground because lightning current often enters a victim through the ground rather than by a direct overhead strike.

Minimize your body's surface area and the ground! Do not lie flat! If unable to reach safe shelter, stay away from the tallest trees or objects such as light poles or flag poles), metal objects (such as fences or bleachers), individual trees, standing pools of water, and open fields. Avoid being the highest object in a field. Do not take shelter under a single, tall tree.

Avoid using the telephone, except in emergency situations. People have been struck by lightning while using a land-line telephone. A cellular phone or a portable remote phone is a safe alternative to land-line phones, if the person and the antenna are located within a safe structure or location, and if all other precautions are followed.

EXTREME HEAT Proper Hydration

There are some simple guidelines which have been prepared by the *American College of Sports Medicine (ACSM)* when it comes to running activities in a hot and/or humid environment. The goal in participating in hot weather is to avoid fluid loss from the body or dehydration. Water not only accounts for some 98% of our body composition, but functions to help deliver oxygen to working muscles, and keeps the body from overheating during strenuous activity. Hard working muscles generate heat which is dissipated through the act of sweating. Evaporation of sweat on the skin allows the body to get rid of this heat and cool it off. Avoid dehydration and make sure you pre-hydrate: Don't wait till you feel thirsty because the body will not be able to tell you in time that you are dehydrated.

ETOBICOKE FOOTBALL CLUB

Here are some practical recommendations:

- 2 hours before exercise, drink at least 16 oz or 500 ml (an average bottle of water)
- 1 hour before exercise, drink at least 08 oz or 250 ml (half an average bottle of water)
During the exercise, drink at least 4 to 8 oz every 15-20 minutes
- Immediately after the exercise, drink at least 16 oz or 500 ml of water or an electrolyte replacing drink
- 1 hour after a training session or game consider drinking 16 oz or 500 ml of skim milk or chocolate milk for protein and muscle repair
- As a rule of thumb you should drink at least 500 ml for every 20 lbs of body weight, therefore, someone weighing 140 lbs needs to drink at least 3500 ml of fluid per day if training or playing that day. Drinking carbohydrate and electrolyte fluids may be beneficial in avoiding heat trauma. Wearing light breathable clothing is advised.

Below is a list of some of the early warning signs to look for:

1. Flushed face
2. Hyperventilation or shortness of breath
3. Headache
4. Dizziness
5. Tingling arms
6. Goosebumps (hair on arms standing on end)
7. Chilliness
8. Poor coordination
9. Confusion, agitation, uncooperativeness

Heat Stroke: is a medical emergency due to a failure of the heat – controlling mechanism. It may occur merely as a result of exposure to heat. Signs & Symptoms include – mental confusion, headache, poor coordination, delirium, convulsions and

ETOBICOKE FOOTBALL CLUB

death. The body temperature may be 106 F or 40.5 C or higher, the skin is usually hot and dry as the sweating mechanism has failed. Call 911 and transport to a local Hospital.

Rapid cooling is the goal using wet towels, spray mist, sponge baths and removal from the heat. This condition could cause the athlete to go into shock and coma may follow so immediate medical attention is required.

SUMMARY/NOTES:

When considering resumption of any athletic activity, it is recommended that everyone should ideally wait at least thirty (30) minutes after the last flash of lightning or sound of thunder before returning to the field.

People who have been struck by lightning do not carry an electrical charge. Therefore, cardiopulmonary resuscitation (CPR) is safe for the responder. If possible, an injured person should be moved to a safer location before starting CPR.

Lightning-strike victims who show signs of cardiac or respiratory arrest need emergency help quickly. Prompt, aggressive CPR has been highly effective for the survival of victims of lightning strikes.
